

## Push Dimming:

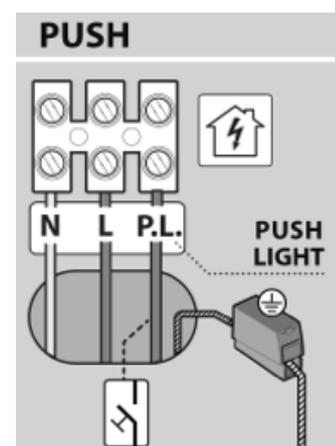

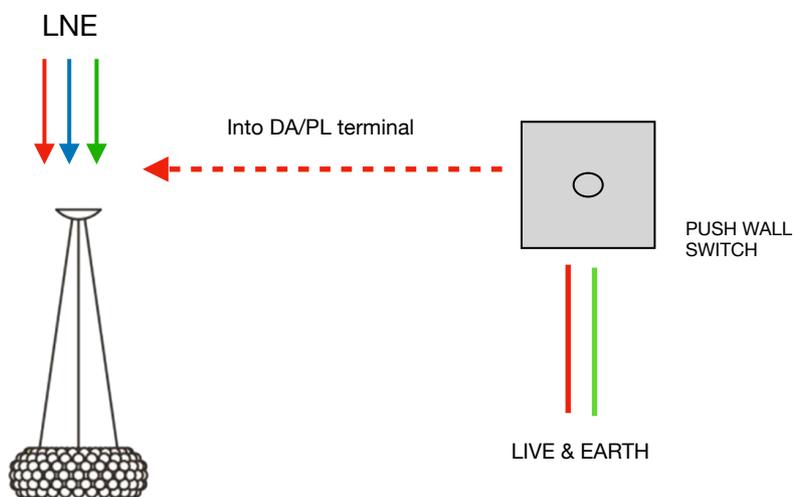

Many clients have asked which wall switch to buy when we talk about **PUSH** to dim. Push to dim or Push-to-make, as it's sometimes referred, uses a single live control wire from the wall switch to send a 'pulse' to the dimmable driver.

As you can see from the diagram below, the power to the light is always live.

To the right you will see an example of a [momentary switch](#) from UK manufacturer, Varilight.

[Varilight XTM1](#)

## Which dimmable version to buy?

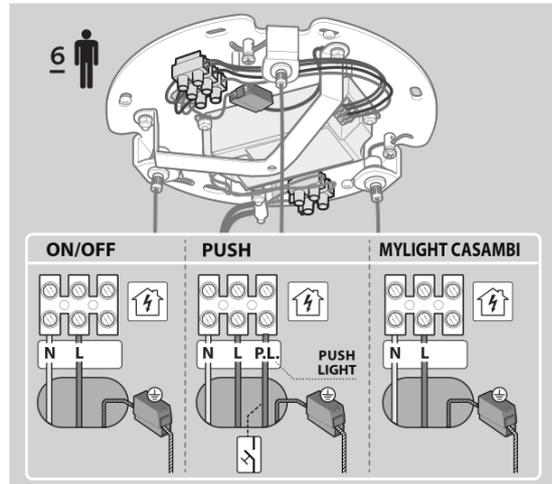

You normally have three options in the price list: **On/off**, **Dimmable / Mylight**

**On/off**: is pretty self explanatory; the driver is non dimmable.

**Dimmable** -this can be wired up as **Dali** with 5 cables (2 from the Dali switch) or **Push** (as above). Dali is often used in new builds or contract scenarios. Client must be made aware of the wiring requirements.

**MyLight** - this is a smart dimming solution that doesn't involve any additional wires.

Example of MyLight wiring

**\* As the MyLight versions can also be wired as PUSH, this is the version that should be recommended to residential clients, as it gives them the most flexibility.**

## MyLight bluetooth system.

**RECAP:** Over the last few years we have noticed several scenarios where clients were struggling to dim LED products, as they didn't have the correct cabling. The two existing control systems require additional cables to what is usually standard in the UK (Push requires x 4 and Dali x 5 cables).

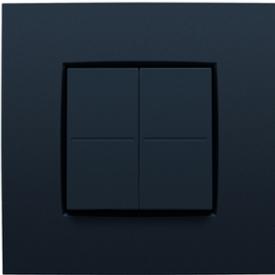

Wall dimmers are also a little more specialist for LED models.

The only exception to these rules are the new **Triac** models. These tend to only feature in lower output lights, like wall lights or smaller suspensions. Triac can be easily dimmed with various mains dimmers.

**Consequently we introduced the MyLight option.**

A Low Energy Bluetooth casambi module is integrated into the LED driver enabling control from all modern smart phones, tablets and even smart watches.

The **Casambi** app can be downloaded free of charge and is easy and user friendly. No new wiring, switch, device or Internet connection is needed. You simply need to install the light source via an **ON/OFF** wall switch and match it through Bluetooth with your device. You can then set your light to the desired level of brightness or even have the brightness change in a set pattern each day. Once set up you don't actually need to keep changing the brightness from the app. For example you could set a scenario, where the light is 90% during the day and 60% after 6pm. Press 'remember last settings' and each time you turn on the light, it will do as previously programmed.

## Casambi Ready products

If you prefer to control your lighting from a wall switch you can now buy [Casambi ready products](#). From bluetooth wall switches to handheld remote controls. These are preconfigured to be used with the Casambi App. Once linked you would control your lighting via the wall switch or remote control.

## Watch the video

**Not just residential** watch the video how Casambi can be used in contract scenarios - [click](#)

## 2021 Collection:

On page 188 of the 2021 price book, you can see the models where MyLight is an option.

The first line relates to the **'true' MyLight** versions, with a fully integrated LED light source, and the bluetooth chip is built into the driver.

**MyLight Collection**

The MyLight models use the smart device Casambi to control light intensity from 100% to complete turning off. The system is easy and user-friendly. No new wiring, switch, device or internet connection is needed. You only need to install the light source and match it through Bluetooth with your smart phone, tablet, or other control devices (see below). No further configurations by qualified staff are needed.

*Tunable White - Caboche Plus and Twiggy*  
Besides light intensity control, it's possible to control the LED light colour degree from 2700 K to 5000 K, from warm to natural or cold light through any intermediate level.

**Models with LED module and Casambi interface integrated**

Aptomb Large, Bahia mini, Caboche Plus media / grande, Nude, Plena, Sun-Light of Love, Spokes, Twiggy

**Models with line voltage LED or E27 retrofit LED and Casambi interface aside**

Buds, Caboche, Chouchin, Gem, Gem semi, Gregg, Gregg semi, Rituals XL, Rituals XL 1-3 semi, Satellight, Superize, Tartan

**Controlled via Bluetooth / Casambi App [iOS / Android]**

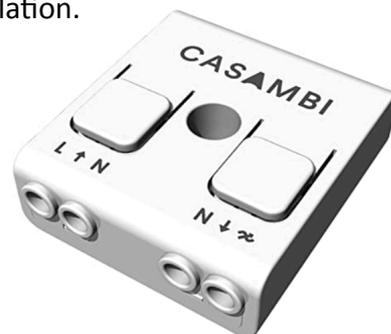

Push button, On/Off, Smartwatch, Smartphone, Tablet, Xpress Casambi, Smart switch

Mesh network

The second line relates to models with either a line voltage LED that can be dimmed using Triac, or fittings with a E27 thread. These models can be ordered as Might versions only on request.

The ML version comes with a Casambi [CBU-TED interface](#). This is a Bluetooth controllable, Casambi enabled trailing-edge dimmer. It can be installed behind a traditional wall switch or in the ceiling void.

Consequently the second line of 'hybrid' MyLight models, do require a little more installation.

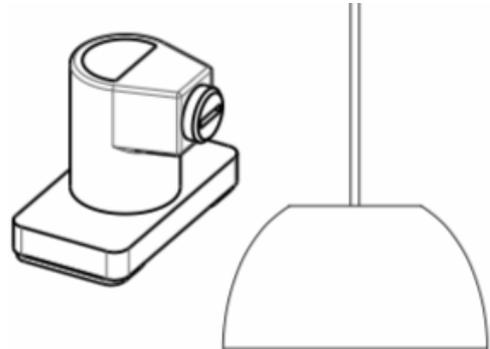

## Other News:

### Multiple Canopy:

When selecting products for use with the multiple canopy; there are no longer different codes for these models. Inside the box you will find the standard ceiling rose and **also** the adapter to mount the light to the multiple canopy.

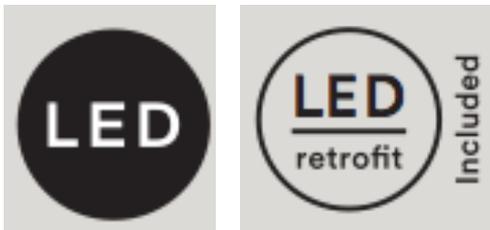

The part you don't need can be discarded or retained as spares.

### LED Indicator:

In the price book when you see the black circle LED symbol, this means the product has an integrated LED light source (part of the light). When you see the Grey LED circle, this means the products has an E27 fitting and is supplied with our own LED retrofit lamp inside the box FOC.

\* Not all E27 models are supplied with a lamp

### Previous Newsletters:

If you have a new member of staff or just want to recap on something, please check out the previous [newsletters](#).

For more information please check out the [MyLight](#) page on Foscarini.com

### Deliveries:

As you should know, we are currently using Tramo for our deliveries to the UK. After facing many issues Post Brexit, we are hopefully on track to resuming a good service. Customs charges of £50 per shipments will be charged by Foscarini in your normal monthly Invoices (orders can be grouped to minimize costs).

At the moment **drop ship is suspended**, with deliveries coming only to your registered address. Hopefully we will be able to resume drop ship in the near future.

Kind regards  
Ben Ritson
